

Android based CarPC

it's been a long time since i last had a car pc in my car.. but being disappointed with the standard car stereo that gm put in the 2007 suburban (with sat nav) i really feel the urge to try once more :) .. only now it won't run windows or linux, now i want it to run android preferably with tomtom as my nav software and among other things a dab plus tuner. this is so far only a collection of links and resources where i collect information eventually leading to building a carpc based on android.

- [android hotkeys](#)
- [joycon ex](#), translates resistance output steering wheel controls to keyboard keystrokes
