

# SkyDemon on Linux (Ubuntu)

this is based on or copied from a [Post in the skydemon forums](#)

1. Install winetricks and wine

```
sudo apt-get install winetricks
```

2. if you are running a 64bit Linux, create a wine 32 bit prefix like this (don't copy/paste, replace username with your user home directory name):

```
WINEPREFIX='/home/username/.wine32' WINEARCH='win32' wine 'wineboot'
```

3. run

```
winecfg
```

and simply click OK when it pops up

4. 

```
cd /tmp/; wget  
http://winetricks.googlecode.com/svn/trunk/src/winetricks
```

5. run

```
bash winetricks dotnet30sp1
```

and follow the instructions (download the dotnet stuff and copy it to the folder they say and re-run the above command)
