

Xrandr GUI

i recently discovered arandr, a GUI for xrandr. if you are using nvidia twinview and experience some problems with an always changing screen layout on every boot, try to use Arandr to create a script that reconfigures your screens using xrandr.

simply configure your screen layout the way you want it, start Arandr and hit Layout→Save As and save it as a shell script.

on my system (running xubuntu) i had to add a

```
sleep 5
```

before the randr line in order to wait for the screens to be initialized and then run the randr instructions. i put the script in autostart and voilà, my screens now always appear as they should.
